

## Region 5 Homeless Population Point in Time Survey January 27, 2010

The North Dakota Coalition for Homeless People (NDCHP) conducted a statewide point-in-time survey of homeless people on January 27, 2010. The survey collected information relating to demographics, education, employment, veteran status, common characteristics, and service utilization.

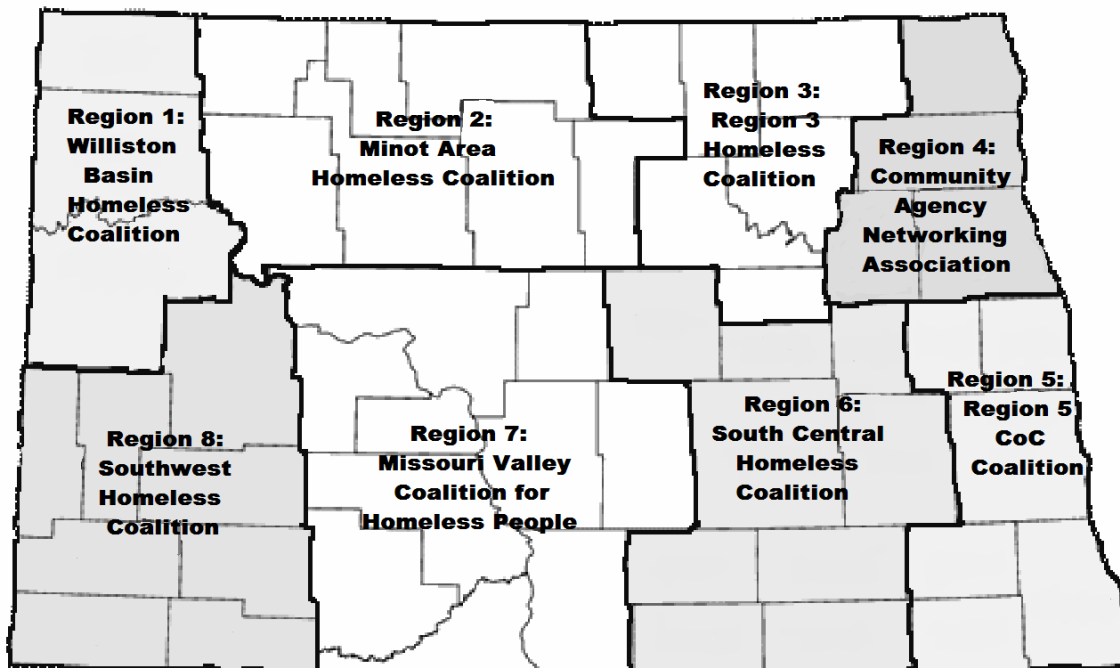

The following table shows the total count of homeless persons by region, age and status as “chronic” or “long term homeless”.

Region	Adults	Children <18	Total persons	Chronic <sup>1</sup>	Long Term Homeless <sup>2</sup>
1	6	5	19*	0	3
2	35	22	59*	0	6
3	101	33	138*	0	16
4	73	34	111*	6	18
5	280	60	347*	49	111
6	39	1	47*	0	18
7	230	142	378*	8	100
8	23	3	27*	1	5
Total ND	787	300	1126*	64	277

\* Information regarding age was not available for 39 homeless persons.

<sup>1</sup> *Chronic status* is determined using the HUD definition, which is an individual with a disabling condition who has been homeless for at least one year or, four or more times in the last three years, and is sleeping either in an emergency shelter or somewhere not fit for human habitation.

<sup>2</sup> *Long term homeless (LTH)* is the definition adopted by the ND Interagency Council on Homelessness, which is an individual or a family with a disabling condition who has been homeless continuously for at least one year or more than four times in the last three years. The ICH definition does not exclude people who are currently living “doubled up” with friends/family, people precariously housed in motels or those in transitional housing.

The 2006, 2007, 2008, 2009 and 2010 survey results for Region 5 and the state of North Dakota are shown below. The results are listed by question and broken-out by subpopulation.

\*Table note: A “median” is the mid-point of the dataset, which means exactly 50% of the respondents are above that number and 50% are below. The median does a better job of accounting for “outliers” in the data (i.e., one respondent that is much higher or lower than all the others can skew the results when you use an average).

\*Table note: A “median” is the mid-point of the dataset, which means exactly 50% of the respondents are above that number and 50% are below. The median does a better job of accounting for “outliers” in the data (i.e., one respondent that is much higher or lower than all the others can skew the results when you use an average).
